Dear [REDACTED] C

Thank you very much for your letter of June 21 [REDACTED] concerning radioactive LSD. At that time we were out of supply and wanted to wait until the chemist could tell us about the new batch of  $C^{14}$ -LSD he was preparing. Within the next 8-10 days, ampuls of labeled LSD will be ready containing 0.5 mg of the substance in 1 cc. The specific activity will be 6-7 microcuries per milligram (2 millicuries per millimol). We could send you only a few milligrams of this LSD, since our stock is rather small. The price of  $C^{14}$ -labeled LSD is \$ 50.-- per mg and covers only our expenses for buying the radioactive acetonitrile used for the synthesis.

With best regards, we remain,

Sincerely yours,  
[REDACTED] C
